

Watch Out Mozzies!

A NEW GENERATION PRODUCT!

- **Now registered in Australia and New Zealand**
- **Easy to apply**
- **Effective for 4 weeks**

Aquatain AMF
LIQUID
MOSQUITO FILM

What Is Aquatain AMF?

Aquatain AMF is a unique silicone-based liquid for mosquito control. It spreads rapidly across the water surface, forming a very thin film.

How Does It Work?

Aquatain AMF has a physical action rather than a chemical action – no toxic chemicals! The thin film on the water surface kills immature mosquito stages and disrupts the mosquito lifecycle.

A very simple principle, but a highly effective product.

The first new active constituent to be registered for mosquito control in Australia for many years.

How Is Aquatain AMF Applied?

No spray equipment required!

Simply squeeze a few drops on to the water surface (1ml per square meter of water surface).

Repeat application in 4 weeks.

Where Can It Be Used?

Aquatain AMF is for use in standing water such as gutters, ponds, blocked drains, water tanks, pot plants, buckets, septic tanks and old tyres – anywhere that mosquitoes breed.

How Effective Is It?

Trials by Health Ministries and other authorities around the world have confirmed its effectiveness in killing mosquito larvae and pupae.

APVMA APPROVAL NUMBER: 62820/44039
PATENTS PENDING WORLDWIDE

Aquatain AMF is available exclusively through Garrards.
