

Kill Mosquitoes Where They Breed...

Without Nasty Chemicals!

- Non-toxic and totally safe to use around your home
- Just drop them in the water!
- Effective for 4 weeks

What are *DengueDrops*?

DengueDrops are a unique product for killing mosquitoes in standing water around your home. Each capsule contains Aquatain AMF – a non-toxic, silicone based liquid for mosquito control.

How do *DengueDrops* work?

Simply place a *DengueDrop* into the water and it will sink to the bottom. The capsule will begin to dissolve in a few minutes, and the Aquatain AMF inside the *DengueDrop* will float upwards and spread across the surface. The very thin layer of Aquatain AMF on the surface will prevent mosquitoes from breeding for up to 4 weeks. (Young wrigglers may still be present after treatment, but they will die before they turn into adults.)

There aren't any toxic chemicals in *DengueDrops* – they work by reducing the surface tension of the water so that mosquito larvae and pupae can't attach themselves at the surface to breathe.

How effective are *DengueDrops*?

Trials around the world have confirmed that the Aquatain AMF inside each capsule is highly effective at preventing mosquitoes from breeding. Packaging the Aquatain AMF into *DengueDrops*

means that the product is now available for widespread distribution to the general public – not just mosquito control professionals.

Are *DengueDrops* effective on other mosquito species?

Yes, the product is just as effective on mosquitoes which spread malaria, West Nile Virus and other mosquito-borne diseases.

How many *DengueDrops* do you need?

Each *DengueDrop* is sufficient to cover an area of about 0.25 square metres.

For buckets, vases, flower pot trays, bamboo pole holders, old tyres, etc use one *DengueDrop*

For larger areas of stagnant water such as gutters and big puddles... use two or more *DengueDrop*.

Safe for fish ponds, bird baths, etc.
