

Lo-Line Monitor

All New!
Ready-to-Use Model!
No Tablets!

Openings in side generate increased attraction by allowing air to flow through the trap

COCKROACH TRAP & INSECT MONITOR

Unlike competitors that put attractant in their glue, B&G uses a new highly proprietary process that actually applies a layer of attractant before the glue is applied. This provides the highest level of attraction to the insect.

- » Large trap with a low profile, fits under tables, and in confined spaces
- » Design prevents cockroaches and insects from escaping
- » Ideal as monitor in IPM programs

Ramp design improves catch rate

- » Highly effective glue for positive catch rates
- » Food based attractant is safe yet very effective for all insects including cockroaches, silverfish, spiders, centipedes and earwigs.
- » Promotes "Green" Pest Control
- » Great for IPM Programs
- » Private label available

Use in sensitive accounts where use of insecticides is limited or prohibited.

The Lo-Line is shown to be a highly effective Bedbug Monitor and Trap.

BedBug Central recently reported, "The performance of the Lo-Line Monitor has become noteworthy in bedbug treatment when compared to other general pest interception devices. During field testing of the Lo-Line this interception device has shown to have the greatest recorded efficacy in capturing bedbugs than other similarly purposed glue boards."

Actual Bedbugs trapped by the Lo-Line Monitor
